

iPads in the Degree Exhibition

Pick up your iPad from Media Resources.

We will also provide a display case and setup help.

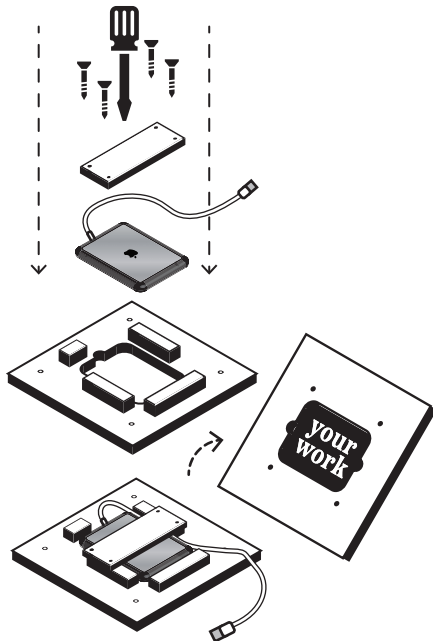

Choose your case.

We have 2 options: a 45 degree angle box, or a flat box. Both have a 16 inch square front wooden frame, and the iPad can be displayed either horizontal or vertical.

Start the setup.

A technician can help install the iPad in the front frame, and help you set up your project on the iPad using the Kiosk Pro app.

Mark your space for install.

Bring everything to your spot in the show, and use masking tape* to mark exactly where it should go on a wall or plinth. Make a tape corner for all 4 corners of the box (the back half, not the front frame), then tape up the "iPad Ready to Install" label next to it.

* Green or blue painter's tape is best. You can use a level to help align it.

iPad Ready To Install

Please tape this label to your exhibit space, and then email designwoodshop@ecuad.ca to arrange for a technician to complete the installation.

Kiosk Pro App

The exhibition iPads come with an app called **Kiosk Pro** that makes it easy to display videos, websites, PDFs, or image slideshows. A technician can help you configure the kiosk settings, and lock your project for the exhibition.

The project files must be loaded from a computer, with a cable.

We will have cables and adapters available for this purpose during the installation days.

Kiosk Pro can easily display:

- Looping video
- PDF
- Website from online URL
- Folder with images for a slideshow
- Folder with all the files for a local website (images, html, css, js, etc)

Doing the kiosk setup yourself:

Please ask Media Resources for a more detailed step-by-step instruction sheet. If you don't do this by yourself, you can plan to do the setup together with a technician.
